PROFESSIONAL SUMMARY

Highly analytical Project Delivery Engineer and Full Stack Software Engineer with 3+ years of professional experience architecting, developing, and deploying scalable enterprise web applications. Proven core competency in Backend Engineering using Python, Django, and Django REST Framework (DRF) alongside robust Frontend Development using Angular and React.js. Demonstrated success managing the end-to-end Software Development Lifecycle (SDLC), translating business requirements into technical specifications, and driving cross-functional development sprints. Expert in database optimization using PostgreSQL and Redis, cloud management via AWS Cloud Services, and implementing highly secure software solutions to ensure business continuity and platform stability.

TECHNICAL SKILLS

Languages & Systems : Python, TypeScript, JavaScript, SQL, Linux/Unix
Backend Architecture : Django, Django REST Framework (DRF), Flask, Celery Task Queues, RESTful API Design
Frontend Engineering : Angular, React.js, HTML5, CSS3, Bootstrap, Responsive UI Design, Figma UI Prototyping
Data Management : PostgreSQL Database Optimization, Redis In-Memory Caching, MySQL
DevOps & Cloud : AWS Cloud Services (EC2), Environment Configuration, Git, GitHub, CI/CD Pipelines (GitLab)
Methodologies & Sec : Agile/Scrum, Sprint Planning, Code Reviews, RBAC Security Protocols, Production Support

PROFESSIONAL EXPERIENCE

Travidux Technologies Pvt. Ltd. – Project Delivery Engineer (PDE) Jan 2026 – Present

- Spearheaded the deployment of 4 complex enterprise systems, supervising end-to-end product life cycles from initial resource scope to final cloud execution.
- Collaborated directly with corporate clients to analyze target technical requirements, translating operational problem statements into structured backend designs.
- Oversaw software delivery lifecycles by structuring feature timelines, managing sprint workload allocation, and tracking milestones using Agile metrics.
- Enforced high-quality code metrics by leading weekly quality audits, verifying software build stability and cross-layer data encryption rules.
- Provided clear technical leadership to a cross-functional squad of developers, removing infrastructure roadblocks and optimizing weekly velocity parameters.

Travidux Technologies Pvt. Ltd. – Software Developer Nov 2023 – Dec 2025

- Architected full-stack enterprise portals scaled for 50 discrete operational branches, optimizing process automated routines to trim system latency metrics by 30%.
- Engineered, validated, and documented 25 internal RESTful web services using Python, securely processing 1,000+ monthly financial network payloads.
- Optimized relational PostgreSQL data models using optimized index strategies and managed an independent memory layer via Redis to boost query speeds by 40%.
- Provisioned web servers on AWS cloud infrastructure, defining scalable environment parameters and reducing runtime post-launch configuration friction by 15%.

NTH Index Software Solutions LLP – Front-End Developer Intern

Jan 2023 – Aug 2023

- Programmed interactive client-facing screens utilizing React.js, producing a 20% elevation in baseline page loading presentation speed metrics.
- Transformed 40 layout wireframes into reusable, modular code blocks, guaranteeing cross-browser layout presentation uniformity.
- Isolated and debugged 50 layout parsing flaws, ensuring layout render accuracy across mobile and desktop interfaces.

Right Soft Options – Software Developer Intern

Jan 2022 – Aug 2022

- Built 3 standalone evaluation sandboxes utilizing Flask frameworks, coordinating feedback loops with a target group of 50 active beta testers.
- Constructed modular web components to wrap application logic, decreasing redundant functional segments by 25%.

KEY PROJECTS

Distributed ERP Infrastructure Design

Python, Django Framework, DRF, PostgreSQL, Redis Memory Caching, Angular, GitLab

- Conceptualized multi-tier access rule protocols and engineered back-office transactional API endpoints.
- Streamlined inventory and analytical ledger tracking for corporate data pipelines, minimizing operational data round-trip lags while maintaining auditable user access paths.

Cloud-Native Resource Scheduler

Python, Django, REST APIs, PostgreSQL Database, Angular Architecture, Bootstrap Layouts

- Developed responsive booking management visual modules connected to asynchronous transaction handlers.
- Engineered logic routines to prevent data scheduling overlapping and organize complex task distribution parameters.

EDUCATION

B.Sc. in Computer Science

2018 – 2021

University of Calicut (College of Applied Science, Chelakkara)
